

Ultrasonic Flowmeter Application Report 167

- Verification Test For Inlet Raw Water -

The UW-30P portable, clamp-on ultrasonic flowmeter provides instantaneous flow rate measurements with up to 2 pairs of transducers placed on the outside of pipes.

In this application, the UW-30P portable flowmeter with 1 pair of sensors measured the flow rate through DN500mm pipe, installed on raw water pipe, non-intrusively shown in the above picture.
